

## INVENTORY & ASSET MANAGEMENT

*IT assets are financially and energy expensive. Our inventory and asset management service alleviates internal resource for the administrative burden, whilst providing executives and operational managers the critical information required for managing an effective business.*

### Key Benefits

- Reduced primary and secondary IT costs
- Accurate MIS for decision making
- Maximise re-use

### Key Features

- Integrated process with move-add-change activity, finance and procurement
- Monthly and ad-hoc reporting
- Centralised information repository

### Business Challenge

In today's ever changing technology environment IT managers are charged with the supervision of an array of complex and expensive IT kit. This, coupled with the high rate of change that prevails, makes a compelling case for diligent and accurate inventory and asset management.

Effective inventory and asset management enable IT managers to highlight areas where they are exposed to inadequate software licensing arrangements. What is more, it allows them to implement planning for aged assets.

In a rigorously cost conscious environment, ineffective re-use of IT assets can eat away at valuable financial resources. In addition, discrepancies between asset registers and IT inventories can lead to even more costly and serious accounting errors. Addressing this is pertinent in a world where SOX hangs over many a manager's head.

Above all, sub-optimal inventory and asset management leaves IT managers exposed to poor information which inevitably leads to ill-informed decisions being made.

### Our Solution

#### Initial assessment

A review of the accuracy of the current inventory, supporting processes and current information repositories. Identification of any serious deficits versus business requirements, conveyed in a summary report.

#### Remediation

One time clean up of the inventory base through the use of discovery tools and physical sampled audits. Design of best in class process to ensure future breaks are minimised or optimisation of the current process to ensure a high level of accuracy. We rarely recommend that new inventory and asset management software is purchased and will generally leverage any existing investments our clients have made.

#### Ongoing service

We will provide a dedicated service to ensure that all future moves, adds, and changes are accurately reflected in the inventory records. This will allow us to provide both ongoing and ad hoc reports so that operational managers and executives are able to make informed decisions.

## Business Benefits

Amiitas helps organisations address the challenges of inventory and asset management with many attractive results.

There are a range of cost savings that can be realised by an organisation. These include reduced maintenance and energy costs; typically £500 and £700 respectively per annum per server. What is more, IT managers often see a reduction in the cost of software license fees or quantified exposure to under licensing issues.

Additionally, robust inventory and asset management processes result in more effective re-use programmes and an increased speed of deployment for critical transformation programmes.

With a detailed view of inventory and assets IT managers are able to more easily financially forecast for the replacement of aged technology. Coupled with this, a more accurate view of the technology landscape is available for accurate internal chargeback.

Cost savings continue as IT staff productivity rises whilst headcount is reduced.

## Clients who have benefited from our services include:

*Deutsche Bank  
Hitachi  
BT  
Verizon  
Emagine  
Royal & Sun Alliance  
IATA  
Resolution Life*

## About Us & Our Approach

We pride ourselves in working in partnership with our clients to ensure business objectives are met. No matter how difficult or complex the project may be, we always work as a team and ensure all of our stakeholders are successful. We are open, honest and are trusted by our clients to honour our commitments.

Service is our business and customer satisfaction our goal. We have a can do ethos which means that we will always deliver what has been asked.

## Key Deliverables

Working closely with our clients, Amiitas undertakes due diligence to completely understand the technology landscape. Following from this we execute a complete inventory of all assets held. Our clients should expect the following:

- Initial inventory accuracy check
- Integration with IT move-add-change processes
- Integration with financial processes
- Integration with procurement processes
- Monthly reporting per client requirement
- Ad-hoc reporting per project and executive requirement
- Trend projections
- Proactive reporting for suggested optimisation processes.

## The Amiitas Advantage

### Proven Track Record of Experts

Our service delivery experts have real operational experience gained from holding senior management and executive positions at many global and blue chip companies such as Morgan Stanley, Goldman Sachs, Motorola, HBOS to name but a few. This wealth of experience coupled with our customer diversity means that optimal solutions can be implemented in short time frames according to our customer's requirements.

### Vendor Agnostic and Market Knowledge

We hold a vehement vendor agnostic position when it comes to selecting products and tools. We firmly believe in maximising the use of existing client investments and will not try to sell you something that we do not believe you require. Our extensive knowledge of the marketplace allows us to provide our clients with the advice they need when additional investment is deemed necessary.

### Delivery, quality, results and value

We are business people who pride ourselves on exceeding the expectations of our clients through the quality of service we deliver and value we create. We only have one agenda, to ensure that our client's business objectives are successfully achieved!
